

ONLINE SHOPPING SYSTEM MINI-PROJECT

Using Django

01

INTRODUCTION

About Full Stack Development

INTRODUCTION TO FSD

- Full stack development involves creating both the front-end (client side) and back-end (server side) parts of a web application, ensuring it functions smoothly and cohesively from the user interface to the database and server logic.

Front-End Development:

- **User Interface (UI):** Designing and building the visual elements that users interact with.
- **Technologies:** HTML, CSS, JavaScript, and frameworks/libraries like React, Angular, or Vue.js.

Back-End Development:

- **Server-Side Logic:** Managing application logic, database interactions, and server configurations.
- **Technologies:** Server-side languages like Node.js, Python, Ruby, Java, or PHP, and frameworks like Express, Django, Rails, or Spring.
- **Databases:** Working with databases such as MySQL, PostgreSQL, MongoDB, or SQLite.

Skills Required:

- **Versatility:** Ability to work with different technologies and frameworks.
 - **Problem-Solving:** Strong analytical skills to diagnose and fix issues across the stack.
 - **Collaboration:** Working effectively with other developers, designers, and stakeholders to deliver a cohesive product.
-
- Full stack development involves a comprehensive understanding and ability to handle all aspects of a web application, from the user interface to the server-side logic and database management.

02

PROBLEM STATEMENT

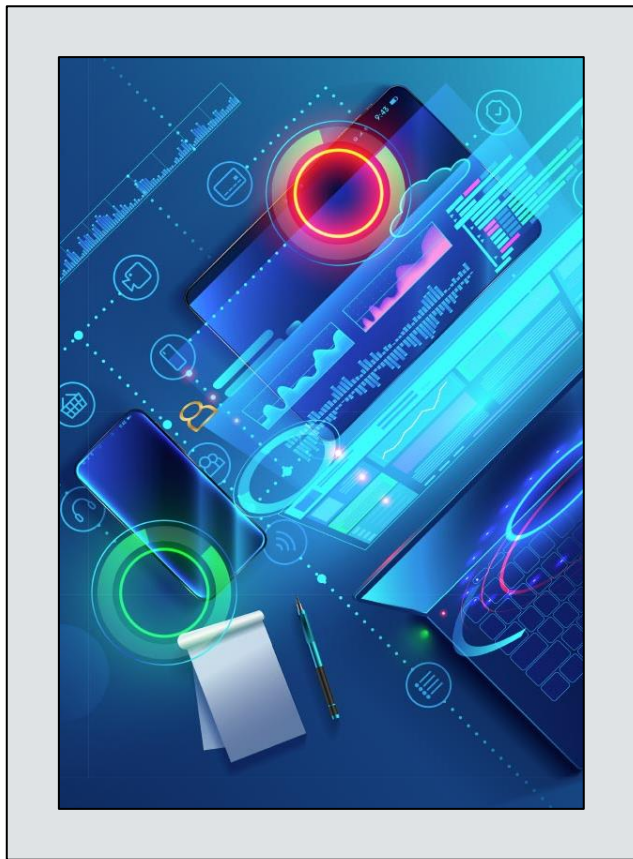

Project statement and Objectives

PROBLEM STATEMENT OF THE PROJECT

- In the current digital marketplace, there is a high demand for efficient and user-friendly e-commerce platforms.
- However, many small and medium-sized businesses struggle to establish an online presence due to limited technical expertise and resources.
- Existing solutions often lack the simplicity, customization, and security needed to meet both consumer expectations and business needs.
- This project aims to address these challenges by developing a streamlined e-commerce website that provides an optimal shopping experience while being easy for businesses to manage.

OBJECTIVES

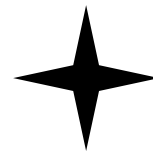

- To deliver a easy and efficient buying experience.
- Ensure a smooth and efficient checkout process to enhance user satisfaction.
- Enable administrators to easily add, update, and delete products.
- To ensure secure transactions and data protection.
- Categorize products effectively for better user browsing and searching.
- Offer a review and rating system for users to provide feedback on products and services.

03

DESIGN

Components used for designing the project

COMPONENTS USED FOR DESIGNING THE PROJECT

- For our Online Shopping System Mini-project we used some components to build the Web application.
- Web Frameworks : - Django, Bootstrap(for CSS).
- User Interface HTML(For page Layout design) and CSS for Front End and Python Django for Backend.
- SQLite3 Database for store the data.
- Integrated Development Environment (IDE) used for the development is V S Code.

04

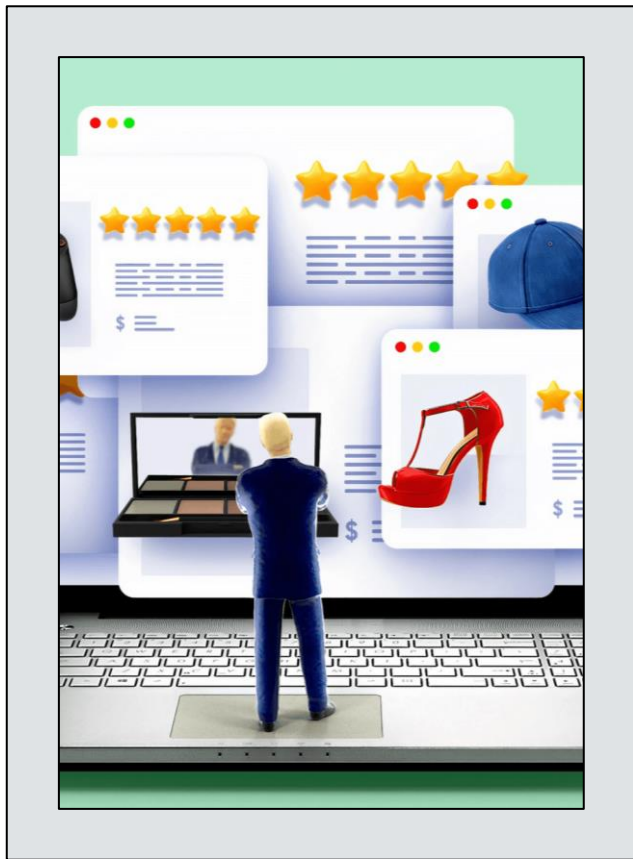

IMPLEMENTATION

Live Demo of Mini Project

IMPLEMENTATION OF PROJECT

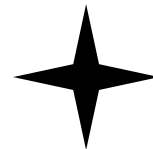

- First we will Create Environment to execute the program.
- Then we add a command to go for a Current Directory which project is present.
- Then we will Run the project using Run Server command.
- Then we will get the URL `http://127.0.0.1:8000/` is a common address used in web development, especially when working with web frameworks like Django.
- Then we can see or display our web application in the Browser
- This is how we implement the Django project.
- Live Demo will be Represented in VS code.

05

ADVANTAGES

Uses of the Project

ADVANTAGES

- **Streamlined Product Management:** Easy product addition, updating, and deletion, with effective categorization for better browsing.
- **Improved Security:** Secure user authentication, data protection, and safe payment processing.
- **Intuitive Interface:** A user-friendly design ensures that customers can easily navigate the website, find products, and complete purchases
- Online marketplaces often have lower operational costs compared to physical stores (e.g., no need for rental space).
- Buyers can buy any products from the comfort of their homes, available 24/7.

06

CONCLUSION

Knowledge gained from this project

CONCLUSION OF PROJECT

- The purpose of this project was to develop a web application and an android application for purchasing items from a shop.
- Users enjoy the convenience of a 24/7 marketplace, competitive pricing, and a diverse range of products, leading to an improved shopping experience.
- This project helped us in gaining valuable information and practical knowledge on several topics like designing web pages using html & css, usage of responsive templates, designing of android applications, and management of database using mysql .
- By addressing common challenges faced by online retailers, this website ensures a user-friendly, secure, and efficient platform for both customers and businesses.
